ATTICA...the benchmark for quality and service

Hydraulic replacement parts

- Using correct parts to original specifications is essential in hydraulic component repair.
- Attica's inventory numbers over one million parts, backed by a quarter-century of experience.
- We are familiar with what parts need to be on hand to meet your requirements.
- We have current or obsolete parts, whether your hydraulic unit was bought last week or during World War II.
 - Attica was founded as a supplier of reground and remanufactured cam rings, plates and bodies.
- Specially designed and built machine tools and proprietary coating and metal treatment techniques have been developed by Attica.
- Parts we process to critical tolerances not only look new, they perform like new--at **discounts up to 90% off list prices.**
 - Largest source of parts is through fluid power OEMs, but our own manufacturing capabilities supply difficult-to-obtain or otherwise cost prohibitive parts.
- Our Benchmark replacement parts line has expanded to include pistons, shafts, cam rings, rotors, seal kits, compensators, cylinder barrels, cartridge kits and more.
- All replacements are put through rigorous tests and inspections to meet or exceed OEM specifications.

Attica's combination of extensive inventory, prompt shipping, product warranty and component quality makes us the best source in the industry to serve all your fluid power parts and assembly needs.
