

It's wet ..

... behind the "ears"
if it's not an OETIKER

OETIKER Clamps for poly pipe applications

OETIKER invented the 1-Ear Clamps, which have long been the standard for convenience of installation, economy and quality.

OETIKER 1-Ear Clamps for low pressure

have been used for years on irrigation systems with black polyethylene pipe. They are economical and easy to install in the field with a pair of pliers. The reinforcing dimple in the clamp ear builds a spring action into the clamp band to remain tight under pressure. It will maintain its tension against vibration and pressure surges.

OETIKER Stepless® Ear Clamps for higher pressure

OETIKER Stepless® Ear Clamps (heavy duty) are for use on irrigation pressure lines, swimming pools or other polyethylene applications.

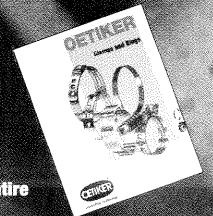

Stepless means that there are no gaps or steps on the inner clamp band circumference. This "stepless" design provides a 360° seal around the pipe.

"SYSTEM OETIKER" is a series of clamps pioneered by OETIKER - the name in clamping world-wide

OETIKER Clamp Program

OETIKER Clamps for poly pipe applications

Features

- slim, light weight yet strong
- quick and easy to install
- economical
- stainless steel UNS S30400 or DIN 1.4301

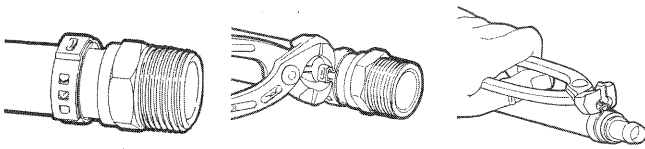

Installation

Careful selection and installation of an OETIKER Clamp is important to ensure a proper sealed or fastened application. OETIKER supplied or recommended tools should be used. Ear Clamps are intended for one-time use only. Prying open the clamp renders the product non-functional. Tampering is visible.

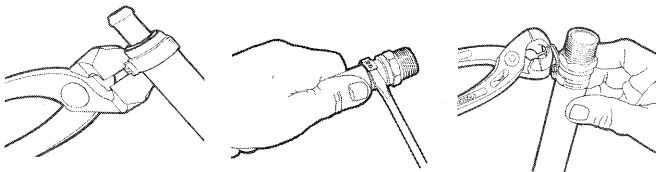

When installing OETIKER Ear Clamps on any barbed fitting, place clamp band over barb (not next to it) and squeeze tight.

Note: Each "clamp ear" must be crimped closed. Some spring-back is normal.

Standard Pincers or Long Handle Pincers

Side Jaw Pincers

Dual purpose, side jaw design allows clamps to be applied or removed in confined areas. Also used like straight jaw pincers.

**Don't just take a clamp ...
... take an OETIKER**

Connecting Technology

OETIKER does not control the use of these products, our warranty can not exceed our FOB points. However, we do stand by our products in workmanship, materials and design. OETIKER products are manufactured to ISO/14001 and ISO/TS16949 guidelines.
