

# Don't just take a clamp or a coupling... Take an OETIKER. Because it's the Original.

## OETIKER 2-Ear Clamps 101 & 151

Suitable for rubber hose or plastic tubing for pneumatic power tools, industrial air or fluid lines, welding or vibrating equipment, electrical cable (strain relief), etc. and especially plant maintenance.

## OETIKER 1-Ear Clamps 153

Popular for clamping diameters from as small as 3.3mm to 8.0mm (1/8" to 5/16"). One-piece design offers quick and easy installation. For air and fluid media lines. Larger sizes are available.

## OETIKER 1-Ear Clamps with insert 154

Popular for clamping diameters from as small as 2.9mm to 8.0mm (7/64" to 5/16"). The curled insert provides an effective 360° seal. Smooth edges prevent damage to hose. Larger sizes are available.

## OETIKER 1-Ear Clamps with Mechanical Interlock 105 & 155

For low-pressure, high-production applications where cost is a factor. For automotive (excluding fuel lines), industrial or poly pipe underground irrigation systems. Available in G 90 galvanized carbon steel, black-painted or 304 AISI stainless.

## OETIKER Stepless® Low-Profile Clamps 168

Available in 5mm, 7mm or 9mm width. Custom manufactured to provide clamping in areas where space is restricted. The precise tongue-in-groove, stepless design provides a smooth inner band circumference for 360° uniform seal. Reusable.

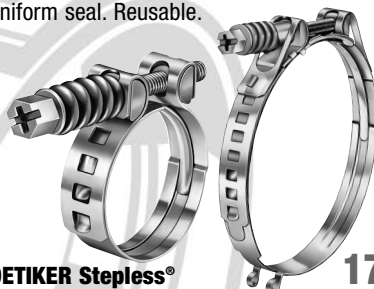

## OETIKER Adjustable Clamps 163

To fasten constant velocity joint (CVJ) boots made of rubber material. A must for re-builders or for other clamping needs where adjustability is required. Provides fast and easy radial or axial installation. One clamp fits various diameters. A multi-purpose clamp.

## OETIKER Stepless® 1-Ear Clamps 167

These clamps are designed for use with silicon, soft rubber, thermoplastic materials, etc., and provide a 360° leak-free seal. Smooth-edged bandsteel prevents damage to hose. Lightweight, strong, low-clearance design. Tampering is visible.

## OETIKER Stepless® Self-Tensioning Spring Clamps 178

For thermal cycle applications. Designed for the truck and bus industry to eliminate cold water leaks on radiator and coolant system hoses. The self-tensioning spring reacts to thermal cycle diameter changes to maintain a strong, concentrated seal to prevent leakage. Perfect for silicon and EPDM hose. Reusable.

## OETIKER Stepless® Screw Clamps 178

9mm width. To fit grooved objects where the application calls for a smooth inner surface. Highly effective when regular worm-drive clamps no longer provide an adequate sealing effect. Perfect for silicone as well as EPDM hose materials, etc.

«SYSTEM OETIKER» series of clamps pioneered by OETIKER – the name in clamping worldwide

Connecting Technology

Please request Product Information Catalogs for entire OETIKER Clamp and Coupling Programs

### OETIKER Clamp Kits for MRO

For factory maintenance. Available in various assorted contents. Totally smooth surfaces with ease of installation and removal. Custom assortments available when quantity warrants.

### Do-it-Yourself

Attach separate locking element to appropriate length of bandsteel and cut to size. Clamps round, flat or irregular shapes. Especially suitable for large diameters.

### Swing Coupling by OETIKER®

Our pneumatic quick disconnect couplings allow full flow with safe, quick connection and disconnection under pressure. The unique design provides superior connecting ease of operation and long service life.

OETIKER Swing Couplings SC interchange with most common plug systems, providing a universal and flexible connection. The quality and reliability of the products have been officially certified.

**Standard Pincer**  
No. 14100082

**Narrow Jaw Pincer**  
No. 14100117

**Miniature Clamp Pincer**  
No. 14100120  
Stainless Steel with adjustable closure stop for clamps up to 7mm diameter.

No. 14100085  
Without adjustable closure stop (not shown).

**Side Jaw Pincers**  
No. 14100083
